### DETAILED ACTION

This communication is in response to amendment received on 06/27/06.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 – 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Muraji et al. (6,867,582).

As to claims 1 – 19, Muraji et al. (hereinafter Muraji) discloses a non-contact position sensor comprising at least one stator (141, fig. 7( c )) and one rotor (146); a space between the stator (141) and the rotor (146) defining over substantially 360 degrees, as a main air gap including at least two movable magnetic poles (144, 145) of alternating polarities; and the stator (141) including at least one secondary air gap in which there is placed at least one mangetosensitive element (143) wherein the stator includes two pole shoes (142, 141) having angular widths that are substantially equal to 120 degrees and 240 degrees respectively, and the two magnetic poles (144, 145) each have an angular width substantially equal to 120 degrees.

***Response to Arguments***

Applicant's arguments with respect to claims 1 - 19 have been considered but are moot in view of the new ground(s) of rejection.
